SQL Job Preparation Assignment 4

1. EMP TABLE'S 3 DYNAMIC COLUMNS SHOULD BE DISPLAYED. Instead of "Select EMP, SAL from EMP," your application should prompt you to choose the column you want to select at runtime.

2. Write a query to retrieve the data, and column names should be given at Runtime. Sort the query based on the first column.

   Note: As we are hardcoding the name of the column, we cannot use "Order By EMP" as the Column name is not yet selected

3. WHAT IS THE DIFF BETWEEN "&" AND "&&"?

4. Write a query to demonstrate '&&' and '&' in a single statement.

5. Write a Query for the below statements
   Table DEPT:

   DEPTNO DNAME LOC
   10 AC HDC
   20 RES CDC

   Table DEPT1:

   DEPTNO DNAME LOC
   10 AC HDC

   Use the SET operator to merge the above two tables; also, no repetition data should be there.
